Tunstall Response

World-class monitoring services

About Tunstall Response

Tunstall Response operates a dedicated specialist alarm monitoring centre, providing monitoring services on behalf of over 170 local authorities, housing associations, police services and charities across the UK. Established over 30 years ago, Tunstall Response operates 24 hours a day, 7 days a week, 365 days a year, monitoring and safeguarding around 80,000 connections.

The centre handled more than two million calls in the last 12 months, receiving an average of 5,500 calls/activations a day.

Who we support

Accredited to the TEC Services Association's (TSA) Quality Standards Framework (QSF) for TEC (Technology Enabled Care) Services, Tunstall Response offers high quality, expert support to people with a variety of needs.

We are able to provide support to:

Older people

People with long-term conditions

People with complex needs

People with dementia

People with physical or sensory impairments

People at risk of domestic violence

Lone workers

People for whom English is not their first language

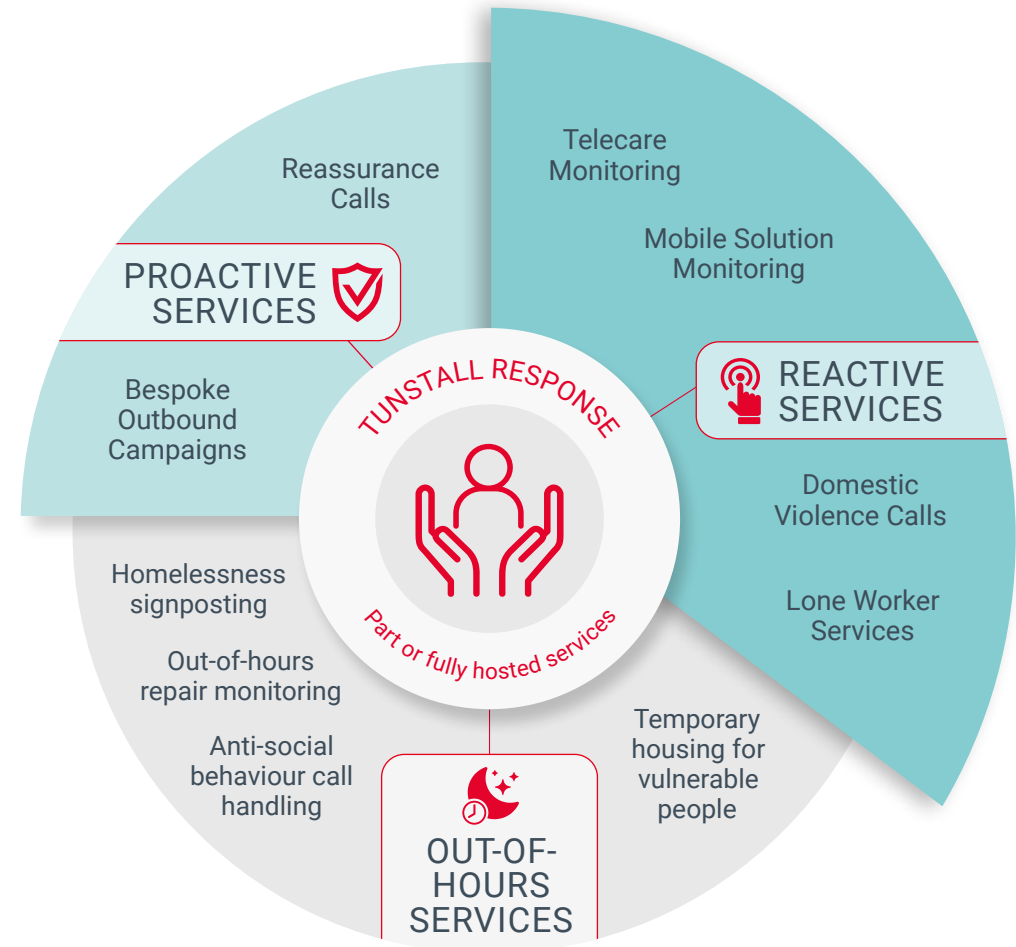

Tunstall Response also offers a range of other support including disaster recovery, out-of-hours monitoring, out-of-hours emergency-repairs triage, lone worker and hosted services.

Our services

Tunstall Response offers a wide range of services, each tailored to the particular needs of the customer.

Tunstall Response's operations are underpinned by Tunstall's PNC IP SaaS (Software as a Service) platform, which supports both analogue and digital signalling. PNC IP SaaS offers rapid call handling, excellent reliability and resilience, and cybersecurity to ISO 27001, meaning your monitoring service is in safe hands.

Our sister company Tunstall Healthcare designs, manufactures, installs and maintains care technology across the health, housing and social care ecosystem. It also offers managed services, helping our customers to transform their services with end-to-end support. This breadth of knowledge and scale of resources makes Tunstall Response uniquely placed in understanding and solving its customers' challenges.

Our centre

Tunstall Response operators are highly trained and experienced and understand the diverse needs of the people they support.

Tunstall Response operates from a purpose-built facility, which houses around 100 staff including operators, administration, clerical and managerial staff. On site there are over 80 dual screen working Response workstations which are wholly dedicated to monitoring services using Tunstall's market-leading PNC monitoring centre software.

We operate to the TEC Services Association's (TSA) Telecare Code of Practice, following the TSA's Code matrix, and use PNC's operational reporting feature, which has been developed to monitor to the TSA requirements. We also adhere to the Data Protection Act 1998, Caldicott Guardianship and the General Data Protection Regulation.

“ We were delighted to hear from a resident who expressed their gratitude to everyone at Tunstall Response for saving her life twice in the previous year. ”

Our training

Providing the highest levels of customer support for potentially vulnerable service users is the cornerstone of our service delivery. Essential to our ability to provide a consistent, professional and empathetic service is the comprehensive, ongoing training our operators undertake to ensure they can provide the most appropriate support to service users in a range of situations.

New operators undergo a detailed three-week induction and training programme, with support and mentoring from our team of experienced team leaders and training personnel. Each operator will then move to supported live calls handling, with full competence only achieved after four to six months.

In line with TSA recommendations, training is carried out in a dedicated training suite and all staff undergo the same training to ensure they are fully equipped to manage calls to a successful conclusion. We use a diverse range of training methods which effectively embeds learning and ensures understanding.

Operators also receive thorough, customer-specific training which is agreed in association with the customer's required protocols to ensure they meet contract requirements. For the first month, the Tunstall Response centre supervisor makes daily checks on calls received and actions taken, ensuring that operators adhere precisely to contractual requirements and protocols.

Only once operators have completed the required training and have proven themselves proficient can they begin to handle live calls.

Training delivery methods include:

Onsite classroom
training

Train the trainer
sessions

Practical hands-on training in
calls handling methodology

Live
training

“ A resident’s family member got in touch to say that they would recommend Tunstall Response to anyone saying it was worth every penny and both they and their parents found it helpful. They also wanted to thank the amazing staff who answer the calls. ”

Business continuity and disaster recovery

Tunstall Response supports almost 400,000 connections as part of our disaster recovery service.

We maintain a detailed Business Continuity and Disaster Recovery Plan, written using the ISO25999 framework, covering all of Tunstall Response's critical systems and technical and physical infrastructures. All critical systems are replicated across two geographically separate sites in real time and each site maintains a dedicated Business Continuity Planning Centre for use by staff in the event of evacuation. This plan is:

- Reviewed and updated annually or when a substantial change occurs that has an effect on the details within the plan.
- Tested biannually using a mixture of real and desktop scenarios, the results of which are documented and fed into the review process.

Business Continuity Site

Should there be a system failure, additional IT and infrastructure backup is provided by Tunstall Healthcare's Head Office at Whitley Bridge. This scaled version of the Tunstall Response Centre can take over activities seamlessly should the need arise.

This commitment and the demonstrable procedures in place ensure that we can provide:

Unbroken 24/7 call handling and escalation services due to real-time data replication between the centres.

Seamless real time continuity of 24/7 call handling services irrespective of any continuity or disaster recovery issues affecting our main control centre.

Competent and appropriate escalation processes for responding to alerts and emergencies.

“ One of our residents experienced a burglary during the early hours of the morning. Acting immediately, the Tunstall Response operator supported the resident, and subsequently the intruder was caught attempting to break into another flat, arrested and later sentenced. The quick actions of the operator prevented another burglary and the constant reassurance to the resident helped with her recovery. ”

A customer's story

Tunstall Response offers a wide range of services, including monitoring on behalf of other organisations. Kensington and Chelsea Council is one of these, with Tunstall Response hosting its Community Alarm Service. The Team tells us more.

“ Our Community Alarm Service (CAS) supports around 2,000 residents who live independently in their home with the safety and security of a 24/7 responder service, whereby, with the activation of a pendant worn around their neck, a resident can alert the team if they need help and they will receive an immediate response.

CAS has been working with Tunstall Response for almost ten years, and they help manage our alarm calls from residential schemes and individuals' homes. Many of the staff from both organisations have been working together for a long time, so we have a great understanding of how to work together and communicate. We meet regularly, have a really open approach to working together, and, most importantly, share the same values in regards to the high standard of service we provide to our residents.

There have been occasions on night shift where we've barely had any alerts through, and it's because the team at Response have been so effective at dealing with calls before they reach us. For example, there might be calls that can be referred to Housing Repairs straight away, or it might be a matter that can be logged

and wait until the morning, like a lightbulb needing changing. Some of our residents have disturbed sleep patterns and just want someone to talk to for reassurance at night.

A year or two ago, a call had come through to Response from a resident in one of our flats. The alert had been raised by their carbon monoxide detector, and this resident was vulnerable and unable to exit their property alone. The Response operator also heard a smoke detector on the call, although this was not the detector in the resident's property. The operator not only alerted us, but also called the Fire Service. It turned out there was a fire in the flat below, and the actions of that operator may well have saved someone's life.

We trust Tunstall Response to be both professional and have empathy, and this can be a fine balance sometimes. We operate as a single team and have great support from all areas of the Tunstall business. At the end of the day, the resident just needs our help and it's important that, to them, the service is seamless and available whenever they need it the most. ”

ABOUT TUNSTALL HEALTHCARE

Tunstall has been at the forefront of technology innovation for the health, housing and social care markets for 65 years, growing to become a UK manufacturer with a global presence. Its pioneering software, hardware and services enable providers to deliver integrated, efficient and person-centred care in the community, and empower people to live more independently and with an improved quality of life.

Tunstall works with social care providers, healthcare services, housing and retirement living providers and charities in 18 countries, improving the lives of more than five million people, including those living with dementia, learning disabilities, physical disabilities and long-term health conditions.

As technology advances and solutions become increasingly digital and cloud-based, we will work closely with our customers and partners to enable them not just react to events, but to predict and even prevent them, using data-driven insights. Our focus is on creating a more connected world that fulfils the potential of technology to offer intelligent care and support, and give people greater choice and control about how they live their lives.
